PROFESSIONAL SUMMARY

Full Stack Developer and Software Engineer with over 5 years of experience delivering web applications, backend services, enterprise systems, and CRM-based solutions. Experienced in transforming user requirements into functional systems, improving existing applications, supporting production stability, and collaborating with cross-functional teams. Skilled in React.js, Blazor WebAssembly, Node.js, Express.js, NestJS, Laravel, PostgreSQL, Redis, Oracle Fusion CRM, Groovy scripting, REST API development, database design, debugging, and maintainable software delivery.

PROFESSIONAL EXPERIENCE

PT IBM Delivery Indonesia, Jakarta

Oracle Fusion Technical Developer

November 2025 - Present

Project: Hino CRM, an Oracle Fusion Cloud CRM system supporting sales operations, dealer management, lead management, contact registration, opportunity tracking, quotation generation, and customer data processing across multiple dealers and outlets.

- Developed and maintained custom business logic using Groovy scripting within Oracle Fusion CRM to support sales and dealer workflows.
- Implemented validation mechanisms to prevent duplicate customer data, including duplicate contact names and phone numbers across the CRM database.
- Designed automation logic for Opportunity-to-Quotation workflows, ensuring accurate data flow between CRM modules.
- Customized CRM objects and fields such as DealerCode, MobilePhone, and customer contact attributes to align with dealer and outlet structures.
- Built and optimized SQL queries and BI Publisher reports to support operational reporting and data validation processes.
- Troubleshoot and maintained existing CRM customizations to ensure system stability and reliability.
- Managed Oracle Fusion sandbox development activities, including testing, publishing, and deployment to higher environments.

PT IBM Delivery Indonesia, Jakarta

Backend Developer

May 2025 - October 2025

Project: Pinang Maksima, a digital end-to-end credit application platform for PT Bank Raya Indonesia, supporting productive retail loans from IDR 500 million to IDR 10 billion through application, approval, disbursement, and monitoring processes.

- Maintained and enhanced backend services built with NestJS for credit initiation, disbursement, and monitoring workflows.
- Maintained RESTful APIs and resolved backend issues to ensure stable system performance in production environments.
- Optimized PostgreSQL database structures and queries to support transactional consistency across system modules.
- Utilized Redis caching to support frequently accessed lookup data and dashboard information.
- Assisted in monitoring and maintaining background jobs and scheduled batch processes related to credit monitoring and system updates.
- Performed debugging, issue resolution, and system support as part of ongoing platform maintenance and enhancement activities.

PT Xsis Mitra Utama, Jakarta

Front End Developer

January 2022 - May 2025

Project: Xsis 2.0, a centralized enterprise application supporting business process management and recruitment workflows across departments including Presales, HRA, Sales, Finance, and Talent.

- Developed responsive web applications using Blazor WebAssembly.
- Implemented Fluxor for efficient and predictable state management.
- Modified and enhanced existing applications based on user requests and business requirements.
- Developed new features across multiple enterprise application modules.
- Collaborated with backend developers to integrate REST APIs efficiently.
- Participated in UI/UX discussions to improve workflow clarity and user experience.
- Conducted unit testing, debugging, and code reviews to maintain code quality, stability, and maintainability.

PT Xsis Mitra Utama, Jakarta

Web Developer

January 2022 - December 2022

Project: Company Group Website Management, a WordPress-based corporate website project focused on maintaining, optimizing, and improving the digital presence of the company and its group subsidiaries.

- Maintained and optimized company group websites built with WordPress.
- Implemented custom tracking using Google Tag Manager and JavaScript to monitor user behavior and website performance.
- Created SEO-focused articles and tutorials to improve organic traffic and search visibility.
- Improved page speed by 70%, resulting in better website performance and user experience.
- Generated monthly website performance reports, including traffic insights, SEO progress, engagement metrics, and server reliability.

- Monitored server uptime and coordinated maintenance activities to ensure website reliability.

PT Xsis Mitra Utama, Jakarta

Full Stack Developer

July 2021 - January 2022

Project: MOTTO (Monitoring of Test and Talent Optimization), a web-based internal application for QC Bootcamp to streamline applicant filtering, online tests, result scoring, and assessment monitoring.

- Developed backend web applications using Laravel for scalable and efficient server-side logic.
- Built dynamic and responsive frontend interfaces using React.js and component-based architecture.
- Integrated React frontend with Laravel backend APIs to support online tests, scoring, and participant monitoring features.
- Designed and implemented Entity Relationship Diagrams to guide database structure and relationships.
- Debugged and resolved application issues to improve stability and user experience.
- Implemented role-based access control and secure authentication flows using industry best practices.
- Refactored legacy code to enhance readability, maintainability, and overall performance.

Xsis Academy, Jakarta

Full Stack Developer

February 2021 - June 2021

Project: Xsis Academy Candidate Assessment System, an internal web application used to manage programming questions, example test cases, candidate data, and assessment APIs.

- Developed frontend features using React.js.
- Built RESTful APIs using Node.js and Express.js.
- Used Firebase Storage for uploaded images.
- Designed Entity Relationship Diagrams and database structures.
- Implemented CRUD operations, authentication flows, API integration, and role-based access control.
- Created technical documentation, handled basic deployment, debugged issues, and improved code maintainability.

PT Omind Muda Berkarya Indonesia, Depok

Backend Developer - Freelance

August 2021 - November 2021

Project: Udadi, a web-based marketplace application designed to support online ordering for fresh fish and daily grocery products.

- Developed backend services using Laravel for scalable and maintainable server-side logic.
- Designed and implemented RESTful APIs for products, categories, promotions, orders, transactions, and users.
- Built backend flows for product browsing, checkout, order processing, and order status tracking.
- Implemented authentication and authorization to secure protected features.
- Designed database models and relationships for users, products, orders, promotions, and transactions.
- Integrated business logic for order validation, price calculation, quantity handling, and transaction status updates.
- Created technical documentation for API endpoints and backend implementation flow.

PROJECTS

Joburaku - AI-Powered Job Application Assistant

Full Stack Project

joburaku.taulikha.site/

Joburaku is a full-stack web application designed to help job seekers manage their job search process, including job application tracking, job search, career profile management, AI-generated ATS-friendly CVs, CV match scoring, and interview preparation based on selected job descriptions.

- Developed a full-stack job tracking platform using React.js, Express.js, PostgreSQL, and Sequelize.
- Implemented authentication features including email login, registration, JWT authorization, and Google Sign-In.
- Built job application tracker features for creating, updating, deleting, and monitoring application statuses.
- Integrated job search functionality with filters such as keyword, location, country, date posted, and work-from-home options.
- Developed AI-powered CV generation using Gemini AI based on user career profiles and job descriptions.
- Added ATS CV match score, PDF CV download, interview question generation, and profile management features.
- Implemented Redux state management, Cloudinary image upload, API integration, validation handling, and backend testing with Jest and Supertest.

Signban - Real-Time Kanban Collaboration App

Full Stack Project

signban.taulikha.site

Signban is a Trello-like real-time Kanban application designed to help teams manage tasks, boards, members, checklists, comments, and activity updates in one collaborative workspace.

- Developed a full-stack Kanban task management application with board, list, card, checklist, comment, and member management features.
- Implemented real-time collaboration using Socket.IO for card movement, board updates, comments, activity logs, and notifications.
- Built drag-and-drop functionality for moving cards across lists with real-time visual updates.
- Integrated AI checklist generation and AI priority suggestion to assist users in breaking down tasks more efficiently.
- Designed authentication, board membership, card assignment, and notification flows for collaborative project management.
- Managed backend API integration and database relationships for users, boards, lists, cards, assignees, checklists, comments, and notifications.

TECHNICAL SKILLS

Front-End: React.js, Next.js, Blazor WebAssembly, Progressive Web App, Tailwind CSS, Material UI, Redux, Fluxor, State Management, Responsive Web Design

Back-End: Node.js, Express.js, NestJS, Laravel, REST API, GraphQL, .NET Core, API Integration, Authentication, Authorization, RBAC

Database and Messaging: PostgreSQL, MySQL, MongoDB, Redis, Kafka, SQL Query Optimization, Database Design, ERD

Oracle and Enterprise: Oracle Fusion CRM, Groovy Scripting, BI Publisher, Sandbox Deployment, CRM Customization, Business Logic Validation

Deployment and Infrastructure: Docker, AWS, Nginx Reverse Proxy, CI/CD, Git, Production Support

Other: Figma, Google Tag Manager, SEO Optimization, Technical Documentation

Programming Languages: JavaScript, PHP, C#, SQL, Groovy

EDUCATION

Gunadarma University - Bachelor's Degree in Informatics Engineering
September 2016 - September 2020 | GPA: 3.54 / 4.00
